SUMMARY

Experienced in technical support with a strong foundation in IT troubleshooting and computer systems. Skilled in diagnosing hardware and software issues, providing user support, and maintaining system functionality in a fast-paced environment. Demonstrates a proactive approach to learning and adapting in real-world IT settings, with a commitment to continuous skill development and professional growth.

EDUCATION

Apprentice Under K-Youth Development Programme (September 2024)
Machining, automation and robotic track (course Productivity AI and IOT)

UniKL Malaysian Institute of Information Technology (August 2021-July 2024)
Diploma In Information Technology **(CGPA 3.57)**

WORK EXPERIENCE

Aexis Technologies Sdn Bhd - Customer Support Engineer (August 2024 - April 2025)

- **Provided first-level technical** and **application support** via phone and remote sessions for both HIS (Hospital Information System) and non-HIS systems.
- **Handled helpdesk operations** including call logging, ticketing, and issue escalation
- Offered **after-hours technical support** to maintain hospital IT operations and business continuity.
- **Monitored Server Room operations** and **ICT alerts** after office hours to ensure system uptime and reliability.
- Provided **phone support** and **responded** to **user inquiries** regarding the HIS (Hospital Information System)
- **Interacted professionally** with customers and maintained good working relationships with users and management to ensure high customer satisfaction
- **Supported daily hospital IT operations,** ensuring all devices**,** systems**,** and networks functioned smoothly**.**
- **Escalated critical issues** promptly to the relevant technical, application, and project management teams to minimize downtime.

Cutting Edge Technology - Technical Support Engineer (May 2025 - Nov 2025)

- **Provided Level 1 technical assistance** to medical staff, administrative personnel, and other hospital departments.
- **Troubleshot** and **resolved issues** related to computer hardware and software, hospital systems, printers, and network connectivity.
- **Supported users** in **accessing the Hospital Information System** (HIS), PACS, LIS, and other healthcare-specific software.
- **Installed, configured,** and **maintained** desktops, laptops, printers, monitors, and medical-related IT devices.
- **Diagnosed** and **repaired hardware failures**.
- **Managed IT asset inventory**.
- Installed, configured, and **updated operating systems** and hospital applications.
- **Assisted** in basic network troubleshooting
- **Supported domain account management**, including password resets, profile issues, and Active Directory object handling.
- **Maintained detailed logs** of technical issues, resolutions, and changes.

Cutting Edge Technology - Network & Server Engineer (Nov 2025 - Present)

- **Configured and deployed multiple switches and wireless access points (APs) across the hospital network, including core switch management, multi-VLAN segmentation, DHCP relay, inter-VLAN routing, and static routing.**
- **Enforced network security controls — Port Security (MAC sticky, shutdown), BPDU Guard, PortFast Edge, and DHCP Snooping with trusted trunks; verified switch performance for zero-downtime production readiness.**
- **Set up and maintained Sangfor SSL VPN for secure remote access to hospital PCs from anywhere, including user account provisioning and access rule configuration.**
- **Managed and maintained servers supporting the Hospital Information System (HIS) to ensure continuous clinical operations.**
- **Set up and maintained a dedicated server for vendor use, handling configuration and ongoing administration.**
- **Administered virtualized infrastructure using VMware vSphere and ESXi, and integrated HPE Alletra 6000 storage into VMware vCenter 7, diagnosing datastore protection alerts and aligning volume collection policies.**
- **Maintained NAS and SAN storage systems, validating snapshot and replication protection policies for data resiliency on production volumes.**
- **Maintained backups for application servers and department shared folders to support business continuity and disaster recovery.**

ADDITIONAL PROJECT

CET Internal Application Server (Proxmox Virtualization)

- **Set up and maintain the company's own server infrastructure for deploying the PPM web application and other internal web apps used across the company.**
- **Installed and configured Proxmox VE as the virtualization platform on a Dell PowerEdge R510, and deployed Ubuntu Server as the application host.**
- **Configured LUN storage served from a separate Dell PowerEdge R730 storage server, connecting it to the virtualization host for reliable application data storage.**
- **Handle ongoing administration and maintenance to keep company web applications available.**

Fintech Terminal (Private / In Development)

- **Designed and built a Bloomberg-style financial terminal application featuring a dense, professional research-desk UI (dark theme, monospace font, orange accents) across Markets, Dashboard, and Crypto trading screens.**
- **Implemented live-updating market data tables (stock indices, forex, commodities, bonds, crypto), a Fear & Greed sentiment index, market breadth and top gainers/losers panels, an economic calendar, and real-time exchange hours.**
- **Built a crypto trading interface with candlestick charting, a live order book, and a paper-trading order entry system with mock balance and order execution.**

Dengar-Kata Quest (Educational Game / In Development)

- **Designed and built a suite of offline 3D listening-and-speaking games for Year 2 Bahasa Melayu pupils: four 3D worlds (one per question type) and ten healthy-eating arcade mini-games.**
- **Built with Three.js/WebGL, a shared visual effects module that scales quality to the device, and a calm display mode for inclusive learners.**
- **Added spoken prompts using text-to-speech and teacher voice recordings, plus MediaPipe camera hand-tracking controls.**
- **Developed a Node.js (Express) + SQLite backend that records scores and answers, with a teacher admin page and Nginx/systemd deployment configs.**

EXTRA CERTIFICATION

Apprentice Under K-Youth Development Programme
Certificate of Completion from T-Robot & MTDC Academy for Machining, automation and robotic track (course Productivity AI and IOT)

(September 2024)

SKILLS

Infrastructure: VMware ESXi, vCenter, Windows Server, Proxmox VE, Ubuntu Server
Networking: Cisco, Sangfor SSL VPN, VLAN, Server Policies, DHCP, DNS, Core Switch Management
Backup: Veeam, Synology NAS, NAS/SAN Storage
Scripting: VBScript, PowerShell, Python, Bash

LANGUAGE

- **Bahasa Melayu (Native)**
- **English (Excellent)**
